

Workshop on Configuration

Vienna, Aug. 29th-30th, 2013

Recommender Systems for Configuration Knowledge Engineering

Alexander Felfernig, Stefan Reiterer, Martin Stettinger,
Florian Reinfrank, Michael Jeran, and Gerald Ninaus

Institute for Software Technology
Graz University of Technology, Austria
{firstname.lastname}@ist.tugraz.at

Overview

- Comments on Existing KE Practices
- Recommendation Technologies for KE (Scenarios)
- Results of First Empirical Studies
- Ongoing & Future Work

Comments on Existing KE Practices

- Model-based Knowledge Representations
- Graphical Development Environments
- Automated Testing & Debugging
- Our Goal: Recommendation Technologies for KE

Example: Collaborative Filtering

<i>user</i>	<i>c</i> ₁	<i>c</i> ₂	<i>c</i> ₃	<i>c</i> ₄	<i>c</i> ₅	<i>c</i> ₆
1	4	2	3	5	1	6
2	3	2	5	6	1	4
3	1	3	2	4	6	5
4	3	2	4	5	1	6
current	?	2	?	?	1	?

nearest neighbors

current user

Recommendation: users who inspected *c*₅ and *c*₂, also inspected *c*₁.

k-means Clustering of Constraints

$c_i \in C$	c_1	c_2	c_3	c_4	c_5	c_6	c_7
c_1	1.0	-	-	-	-	-	-
c_2	0.33	1.0	-	-	-	-	-
c_3	0.16	0.33	1.0	-	-	-	-
c_4	0.16	0.5	0.16	1.0	-	-	-
c_5	0.1	0.25	0.1	0.37	1.0	-	-
c_6	0.0	0.0	0.0	0.0	0.12	1.0	-
c_7	0.0	0.33	0.33	0.16	0.12	0.16	1.0

<i>iteration</i>	c_1	c_2	c_3	c_4	c_5	c_6	c_7
1	1(<i>cs</i>)	1	1	2	2(<i>cs</i>)	2	2
2	1	1(<i>cs</i>)	1	1	2(<i>cs</i>)	2	1

$$sim(c_a, c_b) = \frac{\sum_{v \in V} co\text{-occurrence}(v, c_a, c_b)}{|V|}$$

k groups generated by k-means clustering: each group has a centroid which is the constraint most similar to all others.

Constraint Clustering: Empirical Study

<i>Grouping approach</i>	<i>kba₁: SOL</i>	<i>kba₂: CON</i>
Similar variables	21.43%	42.86%
Similar operators	30.77%	53.85%
Random	38.46%	76.92%

Table 5: Error rates for completing the tasks *find a solution (SOL)* and *find a conflict (CON)* depending on clustering approach (variable-based, operator-based, or random).

The best results were achieved with variable similarity-based clustering (N = 40 subjects).

Understandability of Constraints

$kbb_1: SOL$	errors	$kbb_2: SOL$	errors
$X \rightarrow Y$	21.43%	$X \rightarrow \neg Y$	14.29%
$\neg X \vee Y$	50.0%	$\neg X \vee \neg Y$	34.62%
$\neg Y \rightarrow \neg X$	96.43%	$Y \rightarrow \neg X$	50.0%
$\neg(X \wedge \neg Y)$	73.08%	$\neg(X \wedge Y)$	42.31%
$Y \leftarrow X$	25.0%	$\neg Y \leftarrow X$	16.67%

- Knowledge bases with different representations of „requires“ and „incompatibility“ relations.
- “Preferred” representations can serve as a basis for recommending constraint refactorings.

Ongoing & Future Work

- Evaluation of further recommendation algorithms
- Misunderstandings when formalizing natural language domain descriptions (e.g., “A is only compatible with B”)
- Misinterpretations of formal sentences (e.g., translation of feature model into text-based representation)
- Exploitation of eye tracking data ...

Future Work: Heatmap Visualization

$V = \{v1, v2, v3\}$

$\text{dom}(v1, v2, v3) = [1..3]$

c1: $v1 = 1 \rightarrow \text{not } v2 = 1$

c2: $v2 = 2 \rightarrow \text{not } v3 = 2$

c3: $v2 \leq v3$

c4: $v2 = 3$

c5: $v3 = 3 \rightarrow \text{not } v1 = 1$

Participant filter: All

$V = \{v1, v2, v3\}$

$\text{dom}(v1, v2, v3) = [1..3]$

c1: $\text{not } v1 = 1 \text{ or } \text{not } v2 = 1$

c2: $\text{not } v2 = 2 \text{ or } \text{not } v3 = 2$

c3: $v2 \leq v3$

c4: $v2 = 3$

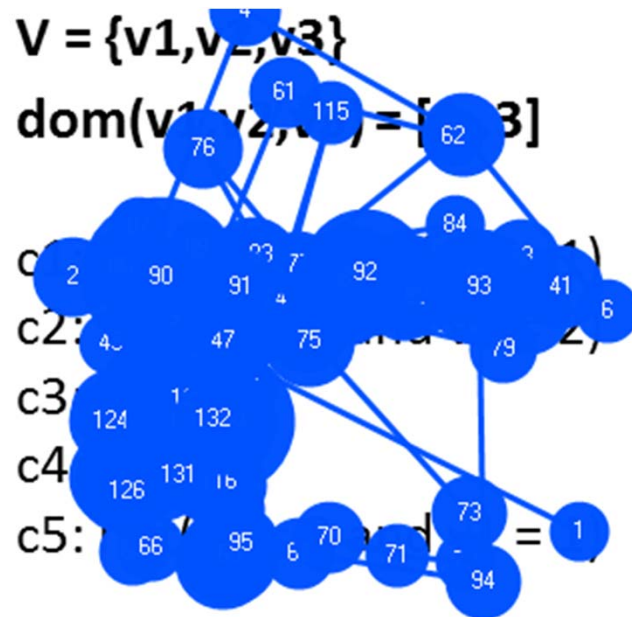

c5: $\text{not } v3 = 3 \text{ or } \text{not } v1 = 1$

Participant filter: All

- Overview of areas, knowledge engineers looked at.
- Can be used, for example, for constraint ranking.

Future Work: GazePlot Visualization

Minimal Diagnoses

- Preferred
- Based on „confusion patterns“

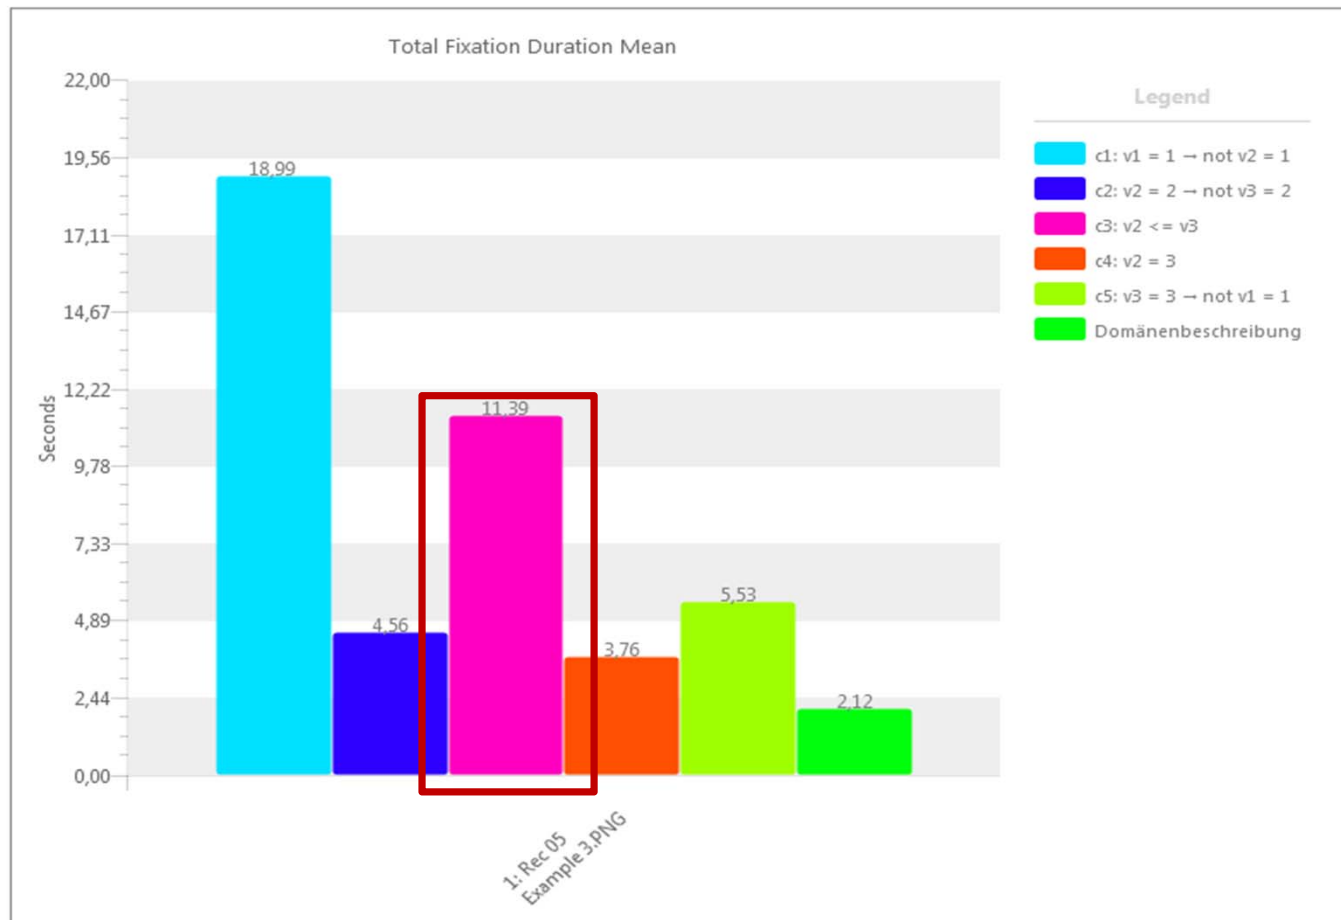

- Sequence of points, knowledge engineers looked at.
- Can be used for the detection of “confusion patterns”.

Conclusions

- Recommendation technologies can improve the quality of knowledge engineering support
- Strongly interdisciplinary research field (CS and cognitive psychology)
- Plenty of open issues, empirical research is needed
- Future work: estimation of cognitive complexity by using orthogonal data sources such as eye tracking

Thank You!

Future Work: Fixation Durations

Time used to investigate different constraints.
